Abstract

The amplitudes and phases of the first three harmonics of the diurnal wave, computed from the Neutron Monitor data of SVIRCO Observatory, are reported in tabular form for the period from July 1976 to December 1986.

Introduction

Galactic cosmic ray intensity exhibits changes over various time scales, up to at least 22-year. Superposed on the long-term variations there is a cosmic ray diurnal wave related to solar time and which amplitude and phase has been observed to change day by day, even in periods of quasi-stationary interplanetary conditions.

This report provides the amplitudes and phases of the first three harmonics of the diurnal wave computed from the neutron monitor data of SVIRCO Observatory for the period from January 1976 to December 1986.

The Rome/SVIRCO Station was admitted in the worldwide Neutron Monitor Network since 1957. From July 1957 to April 1997, the SVIRCO Observatory performed uninterrupted measurements at the Physics Department "G. Marconi" of "La Sapienza" University of Rome (41.90° N, 12.52° E, altitude about 60 m a.s.l.). In May 1997 the detector was moved to the Physics Department "E. Amaldi" of the Roma Tre University

Since then it has been continuously running at the new location (41.86° N, 12.47° E, altitude about s.l.). The Observatory has been housed in a reserved building fitted with a double air conditioning system. The inner temperature has been restrained in a range of 23° - 28° C, meanwhile the relative humidity has been kept down 57%. Either the environmental parameters have been continuously checked by digital sensors.

From July 1957 to May 1966 the detector was an IGY Neutron Monitor, then replaced with a standard NM64 Super Monitor, whose overall dimension varied during the years according with the number of BP-28 counters available:

- 9-NM64 from 01/05/1966 to 14/07/1966 and from 08/05/1969 to 31/12/1980
- 12-NM64 from 15/07/1966 to 07/05/1969 and from 01/01/1981 to 31/05/1984
- 17-NM64 from 01/06/1984 to 31/12/2004
- 20-NM64 from 01/01/2005 to date

(see *Data Reports*: <http://www.fis.uniroma3.it/svirco/>).

Method and data presentation

The intensity data of the secondary nucleonic component of cosmic rays detected in Rome were corrected for pressure variations at a reference level of 1009.25 hPa and then normalized to the counting rate average in the period from January to February 1997 [100% = 554946].

The corrected rates were then processed to obtaining 24-hour running averages and 5-hour running averages. Finally, for each day, the difference between the two time series (5-hour running minus 24-hour running average) was analysed through the Fourier Technique, in order to determine the amplitude (in percent) and the time of the maximum (in UT) of the three harmonics of the diurnal variation.

a) Tables

Daily amplitudes [A_k (%), $k=1,2,3$] and phases Φ_{ik} (UT) of the diurnal harmonics are reported in tabular form for each month together with the a_0 (%) term of Fourier reference level.

When the whole counting rate of the Neutron Monitor was lost for less than 3 hours the hourly data were recovered. When more than three hours per day were lost the amplitudes and phases of the same day and the days before and/or after were omitted (blank cell).

b) Graph

The time behaviour of the first and second harmonics is reported in Figure 1 together with the nucleonic intensity recorded by the Neutron Monitor of SVIRCO Observatory for a particular event (Forbush decrease) related to a transient interplanetary perturbation flowing over the Earth.

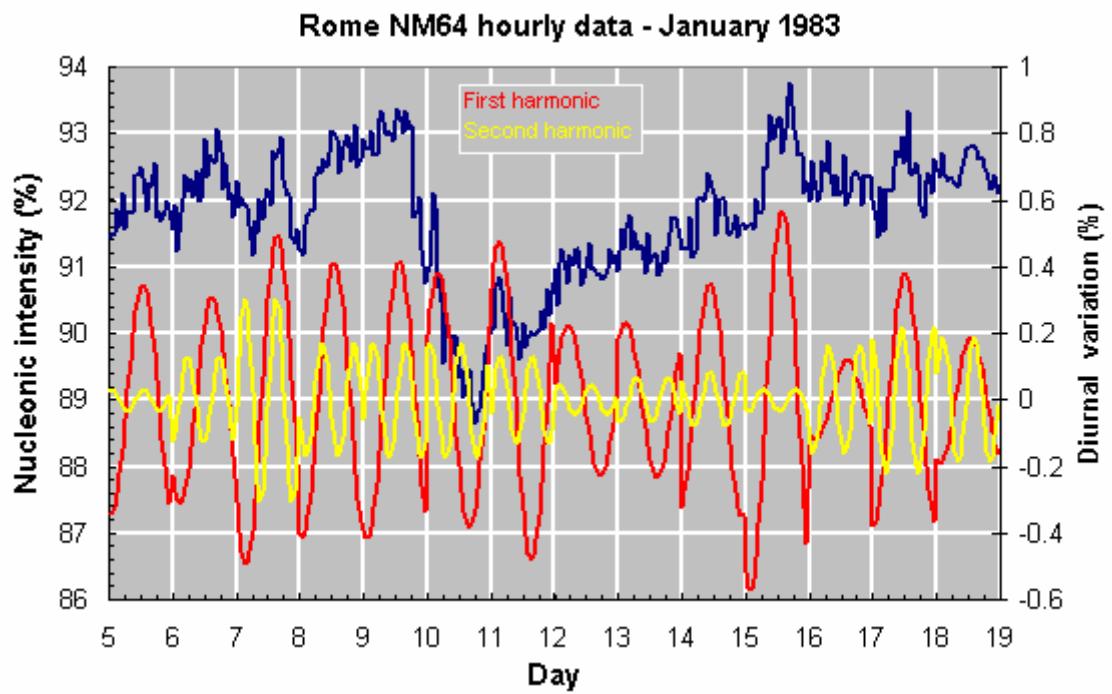

Figure 1 - Cosmic ray nucleonic intensity (blue line) recorded by the Neutron Monitor of SVIRCO Observatory, first (red) and second (yellow) harmonics of the diurnal variation.

Conditions for SVIRCO data use

You are welcome to use SVIRCO neutron monitor data of IFSI/INAF-UNIRomaTre collaboration under the following conditions:

You agree to acknowledge our financial supports in any published use of the data, example:
"SVIRCO NM is supported by the INAF - UNIRomaTre collaboration"

You are kindly requested to send a copy of any published work derived from our data to:

Dr. Marisa STORINI
Head of SVIRCO Observatory & TPL
Istituto di Fisica dello Spazio Interplanetario
Area di Ricerca Tor Vergata
Via del Fosso del Cavaliere, 100
00133 Roma - Italy
