## SVIRCO DATA FOR GLE N° 71

**Fabrizio Signoretti and Marisa Storini**

IAPS - INAF, Area di Ricerca Roma - Tor Vergata  
Via del Fosso del Cavaliere, 100 - 00133 Roma, Italy

**Abstract.** The arrival of solar energetic particles (SEPs) in the terrestrial environment can induce Ground Level Enhancements (GLEs). In this paper the data recorded in Rome by the SVIRCO neutron monitor, during the GLE N° 71 [ May 17, 2012 ], have been collected and reported in the standard international format to be used in the evaluation of SEP spectra.

## 1. Introduction

The phenomenon of the so-called Solar Energetic Particle (**SEP**) emission is named Solar Particle Event (SPE; note that the acronym SPE is also used for a Solar Proton Event, i.e. if only the solar proton population of the event is considered) when an intensity increase of several hours is identified in the time series of the solar particle flux, registered by an instrument in space or in a planetary environment. There is a wide interest of the scientific community on the identification of such kind of events in the Earth's atmosphere. In fact, both the atmospheric and cosmic-ray physics communities are involved in SEP studies. The first ones are mainly interested on the role of SEP impact on ozone (O<sub>3</sub>) abundances and they look at these phenomena as precious opportunity for testing their general circulation and chemistry-transport models. The others are looking for information on the particle source conditions, acceleration mechanisms and their propagation in the Solar System. In particular, nowadays, efforts are addressed to the SPE forecast for Space Weather purposes and Space Mission Planning.

When SEP particles reach relativistic energies they can be identified in the ground-based registrations and they are known as **Ground Level Enhancements**.

In this paper the data recorded in Rome by the SVIRCO neutron monitor, during the **GLE N° 71** [ May 17, 2012 ], were collected and reported in the standard international format to be used in the evaluation of SEP spectra. Moreover the time history of the percentage increase, above the pre-increase average counting rate determined from the baseline time interval, was plotted in Figure 1.

## 2. IQSY-NM64 of SVIRCO-Rome

The SVIRCO-Rome neutron monitor is managed by the joint collaboration between the Research Unit: S.V.I.R.CO. Observatory and Terrestrial Physics Laboratory of INAF/IAPS-Roma and the Physics Department of Roma Tre University. The IQSY-NM64 has been operating at the Department of Physics "E. Amaldi" of Roma Tre University since May 1997.

The main characteristic parameters of the measurement site are:

- Geographic latitude: 41.86°N
- Geographic longitude: 12.47°E
- Height: sea level
- Effective vertical cutoff rigidity (Epoch 1995): 6.27 GV
- Number of proportional counters: 17 [1997-2004] and 20 [2005 to present]

The detector is an integral part of the world wide network of neutron monitors, and the recorded data are published monthly in form of prompt reports and yearly as comprehensive final papers (e.g. : Signoretti, F. and Re F.: "SVIRCO Prompt Report: May 2012", Report INAF/IAPS-2012-30, June 2012, Rome, Italy. Signoretti, F., Re, F., Massetti, S., Storini, M. and Parisi, M.: "SVIRCO DATA: January to December 2012", Report INAF/IAPS-2013-04, February 2013, Rome, Italy).

While the data reported in this paper are accurate to the best of our knowledge, we reserve the right to correct them. The users may contact Mr. Fabrizio Signoretti [ [signoretti@fis.uniroma3.it](mailto:signoretti@fis.uniroma3.it) ] for final ASCII files.

## 3. The Standard International Format for GLE data

A standard format for collecting GLE data from the world network of neutron monitors was suggested (Shea et al. 1985) at the 19<sup>th</sup> ICRC in La Jolla, California to the purpose of archiving these data in a unique computerized format suitable for scientific analysis. A revised standard format was produced at the 20<sup>th</sup> ICRC in Moscow (Shea et al. 1987). The new format added a nine line header of accurate station information including geographic coordinates, altitude, standard pressure and barometric pressure coefficient, type of monitor and data counts converted in counts per second.

The data presented in this paper were prepared in accord with the Standard International Format for the GLE data, as reported in table 1 and table 2, except for the unit of atmospheric pressure in the "Header Information". The hectopascals (hPa), which are equivalent to millibars, have been used since they are worldwide adopted for measuring atmospheric or barometric pressure after the introduction of the International System of Units (SI).

**Table 1: Header Information**

<b>Line 1</b>	Columns 1-10 :	Station Name (abbreviated if necessary).
	Columns 12-19 :	The word "LATITUDE".
	Columns 22-27 :	Station latitude (F6.2). Indicate southern latitudes by a minus sign in Col. 22.
	Columns 32-40 :	The word "LONGITUDE".

	Columns 44-49 :	Station longitude (F6.2) in degrees east of Greenwich; all positive numbers.
	Columns 54-61 :	The word "ALTITUDE".
	Columns 64-67 :	Station altitude (I4) in meters above sea level.
	Column 69 :	The letter "M" to designate meters.
<b>Line 2</b>	Columns 1-10 :	Station Name (abbreviated if necessary).
	Columns 12-21 :	The word "INSTRUMENT".
	Columns 24-31 :	Start of instrument description as follows: For a NM-64 the designation is XX-NM-64 where XX, the number of tubes, is in columns 24-25. For an IGY monitor, IGY appears in columns 26-28 and the remaining columns are blank. For other instrumentation leave columns 24-31 blank and utilize columns 34-75 as indicated.
	Columns 34-75 :	The type of detector (e.g. neutron monitor). If the detector is an ionization chamber, a muon telescope, or a specialized instrument such as a bare counter or multiplicity counter, it would be indicated here and columns 24-31 would be blank.
<b>Line 3</b>	Columns 1-10 :	Station Name (abbreviated if necessary).
	Columns 12-28 :	The words "STANDARD PRESSURE".
	Columns 31-37 :	The standard pressure (F7.2). If the standard pressure is in centimeters or inches use (F7.2); if in millimeters or millibars, use (F6.1, 1X).
	Columns 41-44 :	The units of the pressure: "MMHG", "CMHG" or "INHG" as appropriate. If "MB" is used, the letters go in columns 42 and 43 with columns 41 and 44 blank.
	Columns 47-57 :	The word "COEFFICIENT".
	Columns 60-66 :	The value of the barometric pressure coefficient in percent per unit pressure (F7.4).
	Column 68 :	The percent sign (i.e. %).
	Column 70 :	The slash sign (i.e. /).
	Columns 72-75 :	The units of pressure: "MMHG", "CMHG", or "INHG" as appropriate. If "MB" is used, the letters go in columns 73 and 74 with columns 72 and 75 blank.
<b>Line 4</b>	Columns 1-10 :	Station Name (abbreviated if necessary).
	Columns 12-46 :	The words "PRE-INCREASE BASELINE TIME INTERVAL".
	Columns 50-55 :	The year, month and day of the pre-increase baseline time interval (3I2).
	Columns 59-64 :	The hour, minutes and seconds of the start of the baseline time interval (3I2).
	Column 65 :	The hyphen (i.e. -).
	Columns 66-71 :	The hour, minutes and seconds of the end of the baseline time interval (3I2).
	Columns 74-75 :	The letters "UT".
	<i>Note that the baseline time interval is the interval from which the percentage increase is calculated. The complete hour (in UT) before the onset of the particle increase at the Earth would be the commonly used time interval (e.g. the earliest onset for the increase for the event on 7 May 1978 was approximately 0335-0338 UT; thus the baseline from which percentage increases would be determined is the average counting rate for the hourly interval 0200-0300 UT. For historical data where only bi-hourly records are available, the baseline would be the two-hour interval prior to the earliest onset).</i>	
<b>Line 5</b>	Columns 1-10 :	Station Name (abbreviated if necessary).
	Columns 12-45 :	The words "PRE-INCREASE AVERAGE COUNTING RATE".
	Columns 50-56 :	The value of the pre-increase average counting rate in counts per second (F7.2).
	Columns 59-75 :	The words "COUNTS PER SECOND".
<b>Line 6</b>	Columns 1-10 :	Station Name (abbreviated if necessary).

	Columns 12-25 :	The words "TIME INTERVALS".
	Columns 29-32 :	The number of seconds (I4) in the largest time interval of data in this dataset (i.e. 3600 for hourly data).
	Columns 33-72 :	The number of seconds in the various time intervals used in the dataset in a 5(4X,I4) format. (For example if both 5-minute and 1-minute data are included the following would appear: bbbbb300bbbbbb60 where b indicates blanks). A total of 6 time intervals can be given.
<b>Line 7</b>	Columns 1-10 :	Station Name (abbreviated if necessary).
	Columns 12-24 :	The words "SCALE FACTORS".
	Columns 30-35 :	The scale factor used in the largest time interval (F6.2). (For example if the scale factor for the hourly counting rate is 128, this is given as 128.00).
	Columns 36-75 :	The scale factors used for each of the various time intervals given in columns 33-72 of Line 6 in the same order as given on that line. The format is 5(2X,F6.2).
<i>Lines 8 and 9 are column headers for the data that follow.</i>		
<b>Line 8</b>	Columns 1- 7 :	The word "STATION".
	Columns 12-17 :	The letters "YYMMDD" indicating year, month, and day.
	Columns 20-22 :	The letters "SEC" indicating the number of seconds in the time interval.
	Columns 26-34 :	The words "TIME (UT)".
	Columns 37-40 :	The word "CODE".
	Columns 44-50 :	The letters "UNCORR." Indicating values not corrected for barometric pressure.
	Columns 52-57 :	The letters "PRESS." indicating barometric pressures.
	Columns 63-67 :	The letters "CORR." indicating values corrected for barometric pressure.
	Columns 70-75 :	The identification "% INC." indicating percentage increase (i.e. above baseline).
<b>Line 9</b>	Columns 26-33 :	The word "INTERVAL".
	Column 38 :	The letter "T" for the Time code (see below).
	Column 39 :	The letter "DH for the Data code (see below).
	Columns 46-48 :	The designation "C/S" indicating counts per second.
	Columns 52-57 :	The units of pressure within parentheses as follows: "(MMHG)", "(CMHG)", "(INHG)", or "( MB ) ~
	Columns 64-66 :	The designation "C/S" indicating counts per second.

**Table 2: Data Format**

Columns 1-10 :	Station identification (alphanumeric; abbreviated if necessary, and identical to identification in header).
Columns 12-17 :	Year, month and day (3I2).
Columns 19-22 :	Number of seconds in this time interval (I4).
Columns 24-36 :	The hour, minutes, and seconds of the beginning and end of this time interval (3I2, 1H-, 3I2).
Column 38 :	Time code as follows: 0 - Time accurate to nearest minute. 1 - Time accurate to nearest second. 2 - Time accurate to nearest 10 seconds. 3 - Time accurate to nearest 30 seconds.  7 - Time uncertainty 1 to 5 minutes. 8 - Time uncertainty greater than or equal to 5 minutes. 9 - Probable time error of unknown amount in source data; time given has been adjusted.

Column 39 :	Data code as follows: 0 - Uncorrected, pressure (measured) and corrected cosmic ray data given. 1 - Uncorrected, pressure (interpolated) and corrected data given. 2 - Only corrected cosmic ray data given. 3 - Only uncorrected cosmic ray data given. 4 - Corrected and uncorrected cosmic ray data only. (No pressure given for observation period; insufficient information for pressure interpolation). 5 - only percentage increase given. (Baseline time interval used may be different from standard). 6 - Cosmic ray data do not exist (e.g. due to calibration, equipment failure, etc.). 9 - Existence of cosmic ray data unknown.
Column 40 :	Optional comment code * to indicate time intervals during which specific problems have occurred, such as equipment failure or reduced precision in the data. Comments should be added at the end of the data file, following the end-of-data indicator, and preceding the end-of-dataset indicator as described.
Columns 42-50 :	Uncorrected counting rate; counts per second (F9.2).
Columns 52-58 :	Barometric pressure. Use (F7.2) if pressure is in centimeters or inches; use (F6.1, 1X) if pressure is in millimeters or millibars.
Columns 60-68 :	Corrected counting rate; counts per second (F9.2).
Columns 70-75 :	Percentage increase (F6.1) above the pre-increase average counting rate determined from the baseline time interval.
<i>Line following the last data entry:</i>	
Column 1 :	End-of-data indicator *. Remainder of line is blank.
<i>Line(s) following the end-of-data indicator:</i>	
Columns 1-7 :	The word "COMMENT".
Columns 12-17 :	Year, month, and day of the data marked by the comment code.
Columns 19-31 :	Time interval of the data marked by the comment code.
Columns 33-75 :	Description of the data marked by the comment code. The comment lines may also be used to indicate that the data have been verified by the principal investigator.
<i>Final line of the datafile:</i>	
Columns 1-75 :	A full line of asterisks to indicate the end-of-dataset.

COMMENT ALERT FROM M. STORINI (IAPS-Rome Coordinator for SVIRCO, LARC,  
 COMMENT ESO and OLC network)  
 COMMENT DATA PREPARED BY F. SIGNORETTI  
 COMMENT FROM JANUARY 1, 2005 THE DETECTOR WAS UPGRADED TO 20 COUNTERS  
 COMMENT GPS TIMER IN USE  
 COMMENT CITATION: F. Signoretti, F. Re,  
 COMMENT SVIRCO Prompt Report: May 2012, Report INAF/IAPS-2012-30  
 COMMENT TO ACKNOWLEDGE:IAPS-INAF/UNIRomaTre COLLABORATION FOR SVIRCO

**Figure 1.** The blue line describes the time history of the percentage increase, above the pre-increase average counting rate determined from the baseline time interval (grey area of the graph) and equal to 155.47 counts per second. The red line shows the 3 period SMA of the same percentage increase. Hourly data were used for the 16<sup>th</sup> of May and 5 minute data for the 17<sup>th</sup> day.
